EDUCATION

Holy Angel University
Bachelor of Science in Computer Science — Dean's Lister

Angeles City, Philippines

PROJECTS

CNN Facial Recognition & GPS Attendance App

Aug 2026

- Conducted comprehensive functional testing and bug tracking for a dual-factor biometric attendance system using CNNs and GPS authentication.
- Coordinated beta-testing phases to verify system features and evaluate real-world performance for logistics applications.
- Co-authored the project thesis, driving the literature review, system methodology, and technical documentation of test results.

Pixie Event Photobooth App

Aug 2026

- Developed a Flutter Web application for an automated, live-event photobooth experience.
- Integrated Supabase and dynamic QR codes for instant, app-free photo downloads.
- Configured the EmailJS API to enable automated, one-touch background photo printing.
- Built a custom camera UI with real-time filters, countdowns, and shutter effects.

District Wheels Mobile Marketplace

Mar 2026

- Developed a dual-role mobile e-commerce platform using Flutter and Dart for seamless buyer and seller interactions.
- Engineered the backend with Supabase, managing PostgreSQL databases, authentication, and multi-asset storage.
- Customized the user schema, optimizing the database by replacing standard follower metrics with a dedicated user biography field.
- Implemented Riverpod for state management to power real-time inventory validation and a smart cart engine.

Metal Screw Defect Detection

Mar 2026

- Engineered an AI quality inspection system using TensorFlow/Keras and MobileNetV2 to automate defect detection.
- Integrated a FastAPI backend for real-time model inference with a cross-platform Flutter mobile app.
- Built an ML training pipeline using OpenCV for image preprocessing, achieving a 72.3% baseline accuracy.
- Documented system architecture and planned future model optimizations to address dataset imbalances.

District Wheels Marketplace

Oct 2024

- Developed a responsive, high-contrast e-commerce storefront using HTML5, CSS3, and Vanilla JavaScript.
- Implemented dynamic UI features, including custom mobile navigation and an interactive hero image slider.
- Structured product grids and dedicated authentication workflows utilizing CSS Grid and Flexbox.
- Optimized the application's database schema by replacing standard follower tracking columns with a custom user biography field.

TECHNICAL SKILLS

- Programming Languages:** Python, Dart, JavaScript, HTML5, CSS3, SQL
- Frameworks & Libraries:** Flutter (Mobile & Web), FastAPI, TensorFlow/Keras, OpenCV, Riverpod, NumPy, Scikit-Learn
- Backend & Databases:** Supabase (PostgreSQL), RESTful APIs, Uvicorn, XAMPP
- Tools & Platforms:** Git, GitHub, VS Code
- Core Concepts:** Machine Learning, Computer Vision (CNNs), Full-Stack Development, UI/UX Layout, API Integration
